How we operate...

- Easy platform registration
- Free online Zoom option
- Wide range of specialist services
- The best consultant-led care
- Online customer / IT service help
- Secure pre-payment billing system

Key Features of MyDoctorsOnline.com: Advanced AI-Powered Technology

Health Data Analysis:

- Patients can upload their medical documents, lab results, MRIs, X-rays, and other imaging reports directly to the platform.
- The AI system analyzes this data, identifying potential diagnoses and suggesting treatment options for doctors to consider.
- For example, based on a patient's blood test results and symptoms, the AI can predict possible health issues and generate relevant treatment recommendations. This helps doctors make informed decisions more efficiently.

Doctor Decision Support:

- The AI module accelerates the decision-making process for doctors while minimizing the risk of errors.
- Even in complex cases, the system offers suggestions that can speed up the treatment process and assist doctors in making the most accurate decisions.
- This support is particularly valuable in high-pressure environments, reducing the burden on doctors and leading to more effective treatment outcomes.

Personalized Treatment Recommendations:

- The AI analyzes the patient's medical history and current health status to create tailored treatment plans.
- By considering past medical data and the current condition, the system identifies the most suitable treatment method for each patient and presents these suggestions to the doctor for approval.
- This approach ensures that every patient receives customized care, enhancing the efficiency of the treatment process and maximizing patient satisfaction.

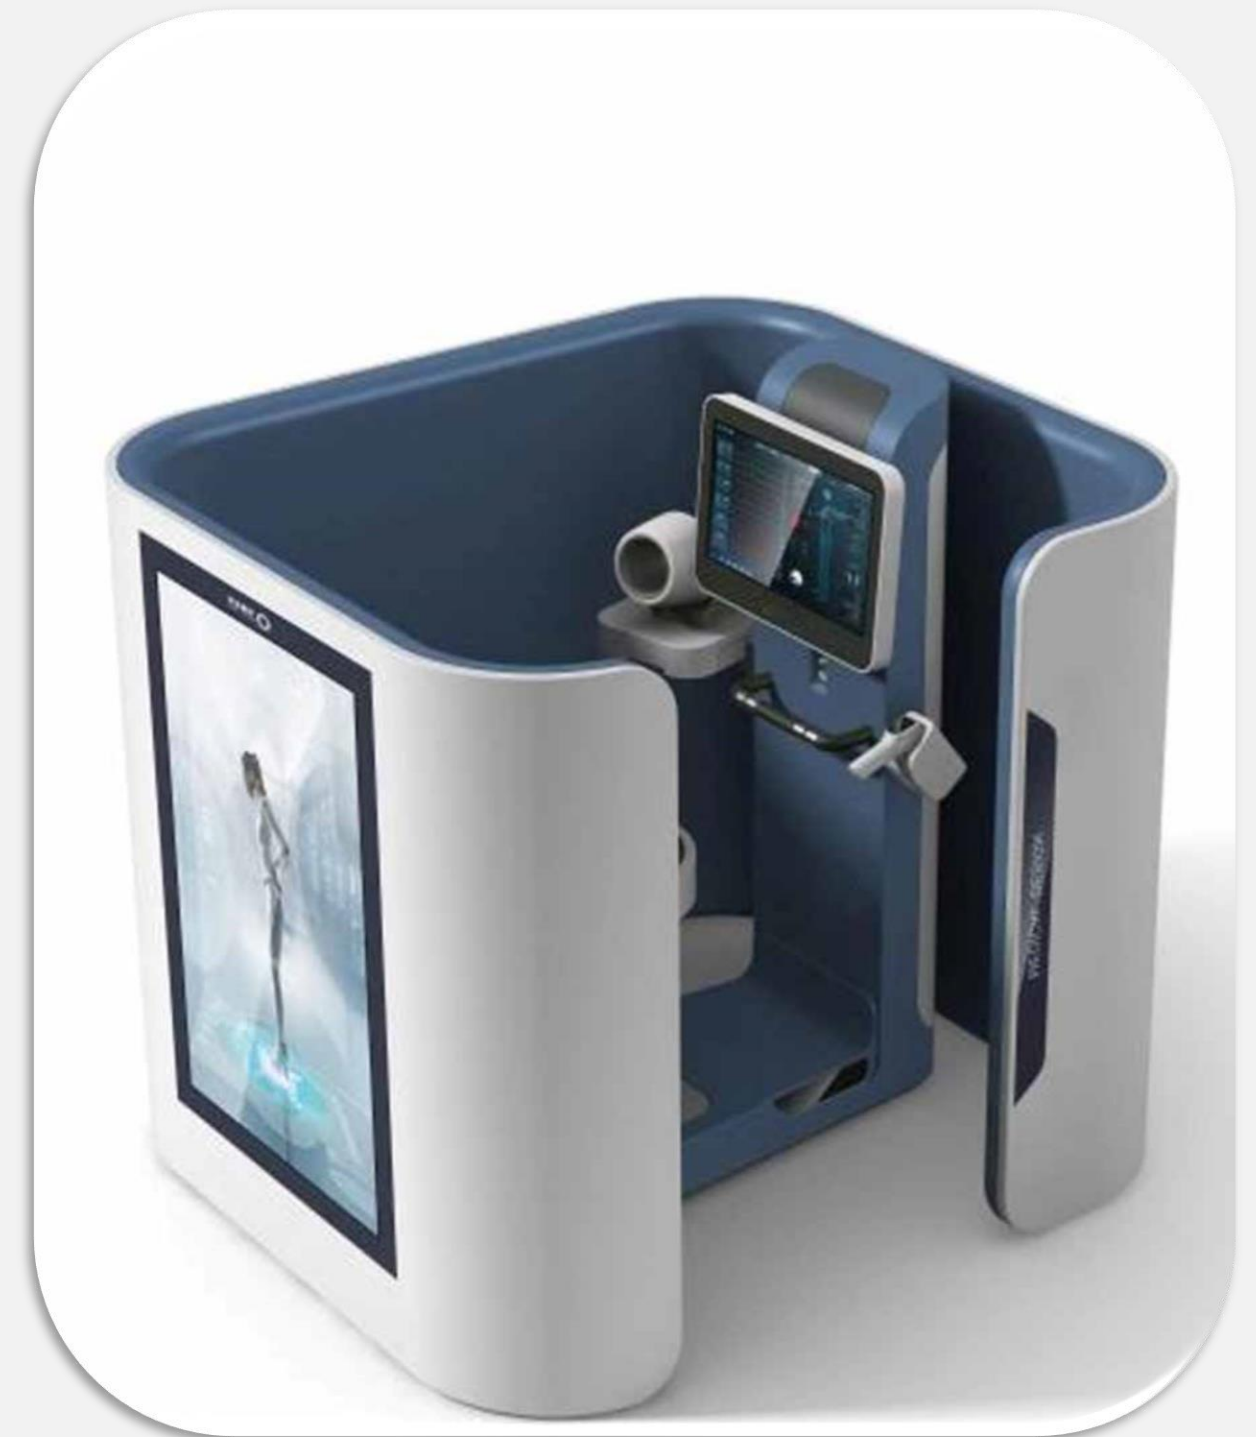

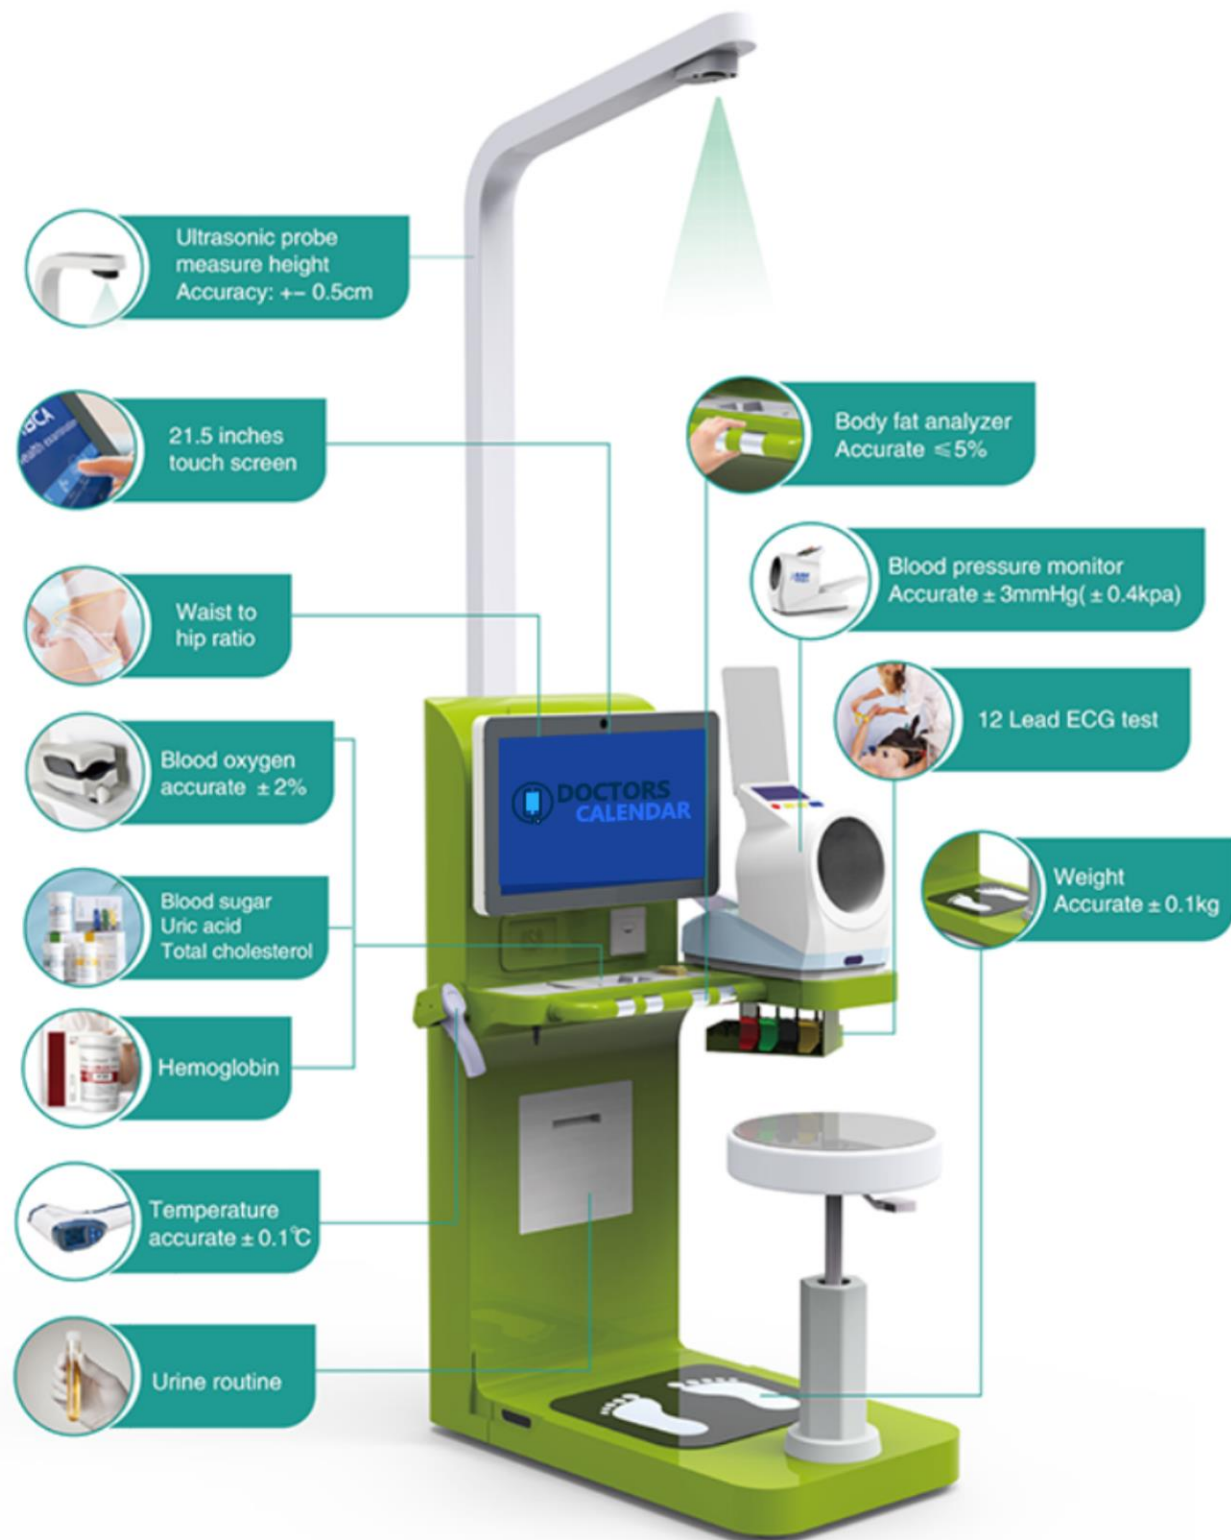

New Feature - Online Appointments, Analysis & Consultation Kiosks

Intelligent body composition & smart health examination Kiosk Health Care Check In Kiosk all in one body check machine can connect HIS system with thermal printing ticket

The Intelligent health examination Kiosk is a health examination device that integrates body weight, BMI, body temperature, blood pressure, pulse rate, blood oxygen saturation, fat content, water content, basal metabolism, and other conventional physical examination functions into one machine. The device comes with a second-generation ID card reader , can quickly read resident identity information, and establish resident health records.
